last minute market

Transforming waste into resource

who?

Last Minute Market Ltd. is a spin-off of the University of Bologna created from a research project of the Faculty of Agriculture and developed since 1998.

what?

LMM **enhances** the recovery of unsold goods in favour of charities institutions on the territory.

LMM **offers** services to enterprises and institutions in order to prevent and reduce waste production at its **origin**.

- **Companies** can manage the surpluses in innovative ways, can reduce costs for disposal of waste and improve their ties with the territory.

- **Public institutions** and the community can benefit from the reduction in the flow of waste to landfill and improve assistance to the weakest sectors of society.

- **The third sector** can reduce operating costs and free more resources to reinvest in quality and quantity

A 360-degree action

LMM develops innovative services for recovery and development of unsold goods. Since 2008, thanks to the anti waste law even the non-food items can be recovered.

unsold food still edible

vegetables not harvested due to market reasons or damaged by unfavourable weather

seeds that do not follow the market standards

products not served by the public and private catering

unsold books that would be otherwise destroyed

pharmaceuticals still likely to meet the health needs of socially disadvantaged people
